1. & 2. Source: Platinum for Fund returns and Factset Research Systems for MSCI returns. Investment returns are calculated using the Fund's NAV unit price (i.e. exclude a buy/sell spread) for C Class and P Class (as indicated), and represent the combined income and capital returns for each of these unit classes in the specified period. All returns are pre-tax, net of fees and costs and assume the reinvestment of distributions. Returns for P Class are net of any accrued investment performance fee. The returns are calculated relative to the MSCI All Country Asia ex-Japan Net Index in A\$. Since inception date for C Class is 04/03/03 and for P Class is 03/07/17.

3. Since inception date of C Class has been used for the purposes of calculating since inception returns of the index. The investment returns depicted in the graph are cumulative on A\$20,000 invested in C Class units in the Fund since the C Class inception date. **Past performance is not a reliable indicator of future returns.** Platinum does not invest by reference to the weightings of the index. The index is provided as a reference only.

4. The "Top ten positions" show the Fund's top ten long securities positions as a percentage of the market value of the Fund's portfolio (including long securities and long securities derivative positions). All data where MSCI is referenced is the property of MSCI Limited ("MSCI"). No use or distribution of this data is permitted without the written consent of MSCI. This data is provided "as is" without any warranties by MSCI. MSCI assumes no liability for or in connection with this data. Platinum Asia Fund

(Quoted Managed Hedge Fund) ASX: PAXX

MONTHLY REPORT 30 April 2024

MARKET UPDATE AND COMMENTARY

This commentary relates to the underlying fund, the Platinum Asia Fund.

- The Platinum Asia Fund returned +2.4% for April 2024 and +5.2% for the rolling 12 months.
- This compares to the MSCI All Country Asia ex Japan Index (AUD) that returned 1.7% for April 2024.
- Our investments in China were the standout performers, contributing 3.5% to the monthly return.
- Even though the valuations in the Chinese market are back to GFC lows, we're very careful when selecting investments in China. We're looking for domestic champions with low levels of debt at compelling valuations.

Performance Analysis*

The Platinum Asia Fund (PAF) returned +2.4% for the month, compared to the index of +1.7%. PAF's Chinese holdings contributed 3.5% to the Fund's monthly return, led by consumer and real estate stocks. We are very careful when selecting investments in China. We're looking for well-run companies with strong moats, low levels of debt and attractive valuations. We prefer domestically-focused companies like JD.com rather than export-focussed companies because they are less susceptible to geopolitical tensions and tariff wars. Having said that, we also own world leading companies such as CATL. It manufactures the low-cost EV batteries that will be essential to reduce overall EV prices and therefor underpin further growth in the global EV market.

The top contributor to performance was Tencent Holdings, a Chinese internet and technology company that is the world's largest video game vendor and a leading social media company. The company's quarterly result boosted the market's confidence that the company is committed to improving shareholder returns, that the cyclical business is improving and the gaming division is turning around.

Online retailer JD.com is one of China's top three e-commerce platforms and has performed strongly over the past three months (share price up over 45% in HK dollars). JD.com benefits from the high level of online sales in China (30%). This compares to America where online sales are in the high teens and to Australia where online sales are only in the low teens. JD.com's revenue is derived from a domestic population, so again it largely insulated from any potential geopolitical escalation or tariff imposts.

Chinese real estate holdings have also contributed to performance. China's property market has been in the doldrums for the past few years, however we have seen the government recently announce stimulus measures targeted at the sector including urban village renovations and social housing programs. The key to the latest programs is that the government can buy excess housing inventory from developers to hold or rent out and/or buy housing in the secondary market to soak up inventory. The Fund's exposure to Chinese real estate is ~5%.

As at the end of April 2024, the Fund had a very high net invested position, approximately 98%, comprising of no shorts and 2% cash. This reflects our high levels of conviction in the stocks in our portfolio and the very low valuations we are seeing in the region. This presents a very compelling investment opportunity for true long-term investors.

An attractively valued portfolio

The Fund's aggregate valuation metrics are attractive in both an absolute sense and relative to the market, with a ~21% higher earnings yield and ~7% discount to book value (see table below). Platinum's contrarian investment process means we are focused on finding businesses that have better long-term growth prospects but are oversold or out of favour due to temporary setbacks and therefore have attractive valuations.

Metric	Platinum Asia Fund	MSCI AC Asia Ex Japan Index (A\$)
NTM Earnings Yield	9.4% (Price to earnings ratio 10.6x)	7.8% (Price to earnings ratio 12.8x)
NTM Dividend Yield	3.1%	2.9%
NTM Enterprise Value-to-Sales	1.3x	1.5x
LTM Price-to-Book Ratio	1.4x	1.5x

The valuations in the table have been calculated by Platinum and for the Fund refer to the long portion of the portfolio, exclude negative net earnings and use FactSet consensus earnings. MSCI data is sourced from Rimes, FactSet and Platinum. As at 30 April 2024. NTM = next twelve months. LTM = last twelve months.

*Source: Platinum. Contribution numbers are based on the total return of individual positions (in AUD) and are gross as they do not take into account the Fund's fees and costs (other than brokerage). **Past performance is not a reliable indicator of future returns.**
