The Manager  
ASX Market Announcements  
Australian Securities Exchange Limited  
Sydney NSW 2000

### Monthly Net Tangible Asset Update

The unaudited **pre-tax** net tangible asset (**pre-tax NTA**) backing per share of Platinum Capital Limited (**PMC**) as at 31 May 2021 was \$1.6962 per share (as at 30 April 2021 it was \$1.6653).

The unaudited **post-tax** net tangible asset (**post-tax NTA**) backing per share of PMC as at 31 May 2021 was \$1.6070 per share (as at 30 April 2021 it was \$1.5826).

The NTA was calculated in accordance with Australian Accounting Standards using the last sale price to value investments. Investments were stated at market value and for the post-tax NTA, after provision for tax on **both** realised and unrealised income and gains.

At 31 May 2021, the PMC share price was \$1.565.

The 31 May 2021 monthly update for PMC is attached to this announcement. For more information in relation to PMC please refer to the website at:

Platinum Investment Management Limited ABN 25 063 565 006 AFSL 221935, trading as Platinum Asset Management ("Platinum") is the investment manager of Platinum Capital Limited ("PMC"). This information is general in nature and does not take into account your specific needs or circumstances. You should consider your own financial position, objectives and requirements and seek professional financial advice before making any financial decisions. Numerical figures have been subject to rounding. Neither PMC nor Platinum, guarantee the performance of PMC, the repayment of capital or the payment of income. The market commentary reflects Platinum's views and beliefs at the time of preparation, which are subject to change without notice. No representations or warranties are made by PMC or Platinum as to their accuracy or reliability. To the extent permitted by law, no liability is accepted by PMC or Platinum for any loss or damage as a result of any reliance on this information.

1. & 2. Source: Platinum for portfolio returns and Factset Research Systems for MSCI returns. The returns are calculated relative to the MSCI All Country World Net Index in A\$ (except the gross MSCI Index was used prior to 31/12/98). The investment returns in the line graph are cumulative on A\$20,000 invested in PMC since inception. Past performance is not a reliable indicator of future returns. Platinum does not invest by reference to the weightings of the index. The index is provided as a reference only.

3. The geographic "Long %" is the exposure to long securities and long securities/index derivative positions, the geographic "Short %" is the exposure to short securities and short securities/index derivative positions and the geographic "Net %" is the difference between the geographic "Long %" and the geographic "Short %", each as a percentage of the market value of the Fund's portfolio. The "Currency %" is the effective currency exposure as a percentage of the market value of the Fund's portfolio taking into account long and short securities, cash, forwards and long and short securities/index derivative positions. The cash "Long %" includes cash at bank, cashflows expected from forwards and effective cash exposures resulting from long securities/index derivative positions, the cash "Short %" includes effective cash exposures resulting from short securities/index derivative positions and the cash "Net %" is the difference between the cash "Long %" and the cash "Short %", each as a percentage of the market value of the Fund's portfolio. For the "Industry breakdown", index positions (whether through ETFs or derivatives) are only included under the relevant sector if they are sector specific, otherwise they are included under "Other".

4. The "Top ten positions" show PMC's top ten long securities positions as a percentage of PMC's portfolio value (including long securities and long securities derivative positions). All data where MSCI is referenced is the property of MSCI. No use or distribution of this data is permitted without the written consent of MSCI. This data is provided "as is" without any warranties by MSCI. MSCI assumes no liability for or in connection with this data. Please see full MSCI disclaimer in <https://www.platinum.com.au/Special-Pages/Terms-Conditions>

## MARKET UPDATE AND COMMENTARY

- Third-strongest financial year to date (i.e. 11 months to 31 May 2021) for PMC's investment performance since 2001, driven by good stock selection on the long side.
- Increasing signs that the market drivers are changing and rewarding cyclicals after a long trend favouring growth and defensives.
- Taking the view that inflation will only be transitory is likely riskier than being open to more persistent effects.

### Market Commentary

Inflation has become increasingly scrutinised. In mid-2020, few thought it would ever return, but increasingly, the data points to rising prices. This follows strong moves in asset prices and supply shortages in areas such as semiconductors, following COVID-driven distortions.

The debate has moved from whether there will be inflation, to whether it will be transitory. Where asset prices sit today, we feel there is more risk in taking the transitory side of the argument. We note the economic recovery, and that stock market, housing market and commodity prices have all rebounded further and faster than expected, so we question whether inflation and interest rates should be any different?

The skew in our portfolio is strongly away from the growth and defensive stocks that were beneficiaries of the central banks' largesse. With governments providing the additional support to economies, the probability of prolonged inflation starts to increase. It is in crisis that we tend to generate the most excitement in terms of new themes in the portfolio, such as travel during COVID and semiconductors in the trade war. Our investments in copper miners and automakers provide exposure to the burgeoning energy transition theme.

Avoiding permanent impairment of capital is our goal; we must acknowledge extremely high valuations at a broad market level and a speculative mania in certain subsets. We are more active on the short side; net market exposure is trending down. In our view, it is highly plausible that markets as a whole will struggle to make real progress in the coming years, but within that, we expect rotations may be highly profitable.

Events like Archegos and Greensill, are now joined by a rapid sell-off in crypto-currencies and a re-emergence of the craziness in so-called meme-stock land. We cannot emphasise enough that the more of these that we see, the more we are alert to risk.

### Performance Analysis\*

For the financial year to date (i.e. 11 months to 31 May 2021), this period ranks 6th in the Company's investment performance history (having regard to the same 11-month period), returning 25% after fees and costs. Over this period of rising markets (MSCI AC World Net Index (\$A) +22%), the long portfolio contributed an impressive +32% to gross returns. This can be broken down to: 'cyclicals' adding +27%; technology adding +8%; and 'defensives' costing -2%.<sup>†</sup> Shorts cost -5% over this period, almost all from the Nasdaq index.

The top 10 contributors added +15%, dominated by resources (Glencore, First Quantum Minerals, Freeport McMoRan) plus Ally Financial, BMW, FedEx, General Electric, LG Chem, Louisiana Pacific and Samsung Electronics.

### Quantitative Analysis

The way markets have behaved in recent years has prompted a lot of talk about 'value' and 'growth'. Our acute focus on price leads to us being viewed as a 'value manager'. However, 'value' is a technical term, which has specific connotations inconsistent with our portfolio construction. Portfolio analysis highlights that at this point in time, the portfolio's most significant difference to broad equity markets, is its higher exposure to rising interest rates. This has been the case over the last few months, with the portfolio's strong performance coinciding with a move upwards off all-time low US bond yields.

### Valuation

Aggregate valuation data is a useful gauge for the portfolio's attractiveness. There appears to be value in an absolute and relative sense, with the portfolio offering a starting earnings yield 46% higher than the market and appearing 41% cheaper relative to the assets backing it.

Metric	Platinum Capital Limited	MSCI AC World Net Index (A\$)
NTM Earnings Yield	7.9% (Price-to-Earnings ratio of 13x)	5.4% (Price-to-Earnings ratio of 18x)
NTM Dividend Yield	2.5%	2.4%
Price-to-Book Ratio	1.7x	2.9x
Enterprise Value-to-Sales	1.3x	2.1x

The valuations in the table have been calculated by Platinum and refer to the long portion of the portfolio, exclude negative net earnings, and use FactSet consensus earnings.

\*Source: Platinum for PMC returns and FactSet Research Systems Inc for MSCI returns. Numbers for long and short positions are based on the total return of individual positions (in AUD) and are gross as they do not take into account fees and costs (other than brokerage). Contribution numbers may not add up due to rounding and the effect of fees. Past performance is not a reliable indicator of future returns.

<sup>†</sup>Cyclicals (64% average weight) include: Industrials, materials, energy, real estate, financials and consumer discretionary; Technology (19% average weight) includes: IT and communication services; and Defensives (7% average weight) include: Healthcare, utilities and consumer staples.
