ASX Market Announcements
Australian Securities Exchange Limited
Sydney NSW 2000

Monthly Net Tangible Asset Update

The unaudited **pre-tax** net tangible asset (**pre-tax NTA**) backing per share of Platinum Capital Limited (**PMC**) as at 31 January 2022 was \$1.6832 per share (as at 31 December 2021 it was \$1.6374).

The unaudited **post-tax** net tangible asset (**post-tax NTA**) backing per share of PMC as at 31 January 2022 was \$1.6073 per share (as at 31 December 2021 it was \$1.5725).

The pre-tax NTA was calculated in accordance with Australian Accounting Standards, based on the fair value of all investments. The post-tax NTA is the pre-tax NTA after provision for tax on **both** realised and unrealised income and gains.

At 31 January 2022, the PMC share price was \$1.48.

The 31 January 2022 monthly update for PMC is attached to this announcement. For more information in relation to PMC please refer to the website at:

MARKET UPDATE AND COMMENTARY

- Solid start to 2022 for the portfolio, with its risk management tools (shorts and currency) driving January returns.
- Sense we may be nearing a regime change in markets; perhaps January was a sneak preview of 2022.
- Portfolio highly differentiated, with almost no net exposure to the US, which dominates global indices.

Market Commentary

For some time, we have been pointing to the risks facing the more speculative elements of the market – from special purpose acquisition companies (SPACs), to cryptocurrency and unprofitable technology stocks, marketed under the guises of disruption, innovation and with endless vistas of total addressable markets – and January provided a glimpse as to what can happen when perfection is questioned.

Intra-month, the Nasdaq Index of high-growth stocks was down around 20% from its highs in November 2021, as investors started to wonder if inflation would perhaps be more permanent, causing bond yields to rise, and at the same time ask if the growth rates and profitability they had assumed would eventuate may not be quite so achievable. Meanwhile, tension in Ukraine was grabbing political headlines, and the Omicron wave was dampening economic activity.

Our approach is about trying to avoid the hype, staying away from the crowd, and we have talked at length about the risks in markets. While this made us appear languid at times, it was a very deliberate approach which led us to enter this year very cautiously positioned on the basis that risks in markets were very asymmetric.

The portfolio is dominated by companies benefiting from trends in, among other areas, decarbonisation (including electric vehicles and materials), travel, technology (via semiconductors), industrial efficiency and the Chinese consumer. The short book is dominated by technology-related stocks that remain over-priced in our view.

In simple terms, what has appeared to many investors to be ‘safe’ could turn out to be very risky, and vice versa. The closest parallel we can use to describe today’s markets is the year 2000. The only difference being that it’s more extreme today.

Performance Analysis*

January’s positive returns, delivered in a falling market, were driven by the portfolio’s short positions, with small profits on active currency positions. With a backdrop of rising bond yields, the portfolio delivered its second period of strength since the market rally from the pandemic sell-off. The first period (Q4 2020/Q1 2021) saw a surge in cyclicals with vaccine discovery, while this time it was more nuanced, with more of a rotation away from over-priced technology.

The breakdown of the last three months is revealing, especially if this is a microcosm of what lies ahead, and perhaps somewhat consistent with the behaviour of the portfolio in the aftermath of the technology bubble.

Over the most recent three months, the long positions contributed 5% (with an underlying market return of 3%), the technology-heavy short book added another 5% to returns, and there were small gains on active currency.

Valuation

The portfolio’s aggregate valuation metrics are attractive in both an absolute sense and relative to the market, with a 50% higher starting earnings yield and a 42% discount on an asset basis (see table below). FactSet consensus earnings as at 31 January 2022 lead us to conclude that the portfolio potentially has marginally higher growth prospects over the next two years than the broader market.

Metric	Platinum Capital Limited	MSCI AC World Net Index (A\$)
NTM Earnings Yield	8.7% (Price-to-Earnings ratio of 12x)	5.8% (Price-to-Earnings ratio of 17x)
NTM Dividend Yield	3.0%	2.5%
Price-to-Book Ratio	1.5x	2.6x
Enterprise Value-to-Sales	1.2x	1.9x

The valuations in the table in respect of the portfolio have been calculated by Platinum and refer to its long portion, exclude negative net earnings and use FactSet consensus earnings. As at 31 January 2022.

*Source: Platinum. Contribution numbers are based on the total return of individual positions (in AUD) and are gross as they do not take into account the portfolio’s fees and costs (other than brokerage). Past performance is not a reliable indicator of future returns.
