Platinum Investment Management Limited ABN 25 063 565 006 AFSL 221935, trading as Platinum Asset Management ("Platinum") is the investment manager of Platinum Capital Limited ("PMC"). Before making any investment decision you need to consider (with your financial adviser) your particular investment needs, objectives and financial circumstances.

DISCLAIMERS: Some numerical figures in this Fact Sheet have been subject to rounding adjustments. The information presented in this Fact Sheet is general information only and is not intended to be financial product advice. It has not been prepared taking into account any particular investor's or class of investors' investment objectives, financial situation or needs, and should not be used as the basis for making investment, financial or other decisions. No company or any directors of any company in the Platinum Group® guarantee the performance of PMC, the repayment of capital, or the payment of income. To the extent permitted by law, no liability is accepted by any company in the Platinum Group or their directors for any loss or damage as a result of any reliance on this information.

The market commentary reflects Platinum's views and beliefs at the time of preparation, which are subject to change without notice. No representations or warranties are made by Platinum as to their accuracy or reliability.

1. Source: Platinum for fund returns and RIMES Technologies for MSCI returns. Performance results have been calculated using the pre-tax net tangible asset value price as released to the ASX and represent the combined income and capital return of the investments for the specified period. Please note that the results are not calculated from the share price of PMC. The returns are calculated relative to the MSCI All Country World Net Index in A\$ (nb. the gross MSCI Index was used prior to 31 December 1998 as the net MSCI Index did not exist). You should also be aware that performance results are calculated using historic points of reference. PMC and its directors cannot guarantee that such results will be replicated in the future; therefore, this information should not be used to make future investment decisions.

2. Source: Platinum for fund returns and RIMES Technologies for MSCI returns. The investment returns depicted in this graph are cumulative on A\$20,000 invested in PMC since inception relative to the MSCI All Country World Net Index in A\$ ("Index") (nb. the gross MSCI Index was used prior to 31 December 1998 as the net MSCI Index did not exist). Performance results have been calculated using the pre-tax net tangible asset value as released to the ASX and represent the combined income and capital return of PMC's investments for the specified period. Please note that the results are not calculated from the share price of PMC. It should be noted that Platinum does not invest by reference to the weightings of the Index. Underlying assets are chosen through Platinum's individual stock selection process and as a result holdings will vary considerably from the make-up of the Index. The Index is provided as a reference only.

3. The "Long %" represents the exposure to physical holdings, corporate fixed income securities and long stock derivatives as a percentage of PMC's net tangible asset value. The "Net %" represents the exposure of physical holdings and both long and short derivatives as a percentage of PMC's net tangible asset value. The "Currency %" represents the currency exposure for PMC's Portfolio as a percentage of PMC's net tangible asset value, taking into account currency hedging.

4. The "Top ten positions" show PMC's top long share exposure positions as a percentage of PMC's net tangible asset value. Long derivative exposures are included. However, short derivative exposures are not.

Market update and Commentary

In January, the market hype around Trump subsided before the inauguration, though resources started to move, helping the Australian dollar higher (dampening returns from overseas assets). The clampdown on outflows from China is probably of greater interest to those speculating in the Australian apartment market than to equity market investors who still seem to have little desire to add to their exposure there. From a socio-political perspective, we may be alarmed by the actions of the new US President, but from a market perspective we need to look rationally at the impact of any Tweets or real policy on the corporates we invest in and on the need to offset any risks in the portfolio.

The bigger risks are the overvaluation of the US market (see bottom left chart) which traded higher only in 1929 ahead of the crash that triggered the Great Depression and near the top of the technology bubble. Neither were good times to invest! The economic cycle in the US is mature, with rates having risen (a long way if you include the removal of QE) and wages are now rising too. We also see fit to protect investors from any systemic issues in China, via short selling the Yuan, and have some hedging (around 20% exposure) to our currency as commodity strength suggests it may go higher in the near term.

From a stock picking perspective, we have a portfolio on a P/E of around 15.5 times forward earnings, which compares favourably with the local market or the US market valuation. We continue to have a bias to Asia-Pacific within the portfolio, with a consumer bias in China and an infrastructure tilt in India. Samsung Electronics is up around 30% since the battery hiccup in Korea and we have a number of individual stories in Japan. With economic growth solid around the world, Europe also contains many attractive investments, while technology champions in the US still have merit in a portfolio.

When one looks at the returns of the financial year to date (7 months), the Company has benefited from strong stock selection in each of the key regions; Asia Pacific, Europe and North America. China, Japan, Korea and the US have each contributed about 2% to returns, as has the balance of the portfolio, including a gain on currency. From a sector perspective, 7% of the return came from cyclicals as defined in the chart above; in other words, the 40% of the portfolio in cyclicals, of themselves, delivered as much as the world markets. IT also made a big contribution. Top stocks since June 30 include Lixil and Inpex from Japan; KB Financial in Korea; France's luxury goods company, Kering; and our two Italian banks, Intesa Sanpaolo and Mediobanca, which were collateral damage in the Brexit fall-out and which we added to well at that time.

In our recent quarterly report, the portfolio manager highlighted possibilities around tax reform in the US and the key issues that may dominate in the year ahead including tension between trading partners. So far, the market has given more credence to "America First" literally without considering the reactions of others.
