1. Investment returns are calculated using the Fund's NAV unit price (i.e. exclude a buy/sell spread) for C Class and P Class, and represent the combined income and capital returns for each of these unit classes in the specified period. All returns are pre-tax, net of fees and costs and assume the reinvestment of distributions. Returns for P Class are net of any accrued investment performance fee. Investment returns are calculated relative to the MSCI All Country Asia ex Japan Net Index in A\$. The investment returns shown are historical and no warranty can be given for future performance. You should be aware that historical performance is not a reliable indicator of future performance. Due to the volatility of underlying assets of the Fund and other risk factors associated with investing, investment returns can be negative (particularly in the short-term). Source: Platinum for Fund returns and RIMES Technologies for MSCI returns.

2. The investment returns depicted in this graph are cumulative on A\$20,000 invested in the Fund since inception relative to the MSCI All Country Asia ex Japan Net Index in A\$ ("Index"). The investment returns are calculated using the Fund's NAV unit price (C Class). They are net of fees and costs, pre-tax and assume the reinvestment of distributions. It should be noted that Platinum does not invest by reference to the weightings of the Index. Underlying assets are chosen through Platinum's bottom-up stock selection process and as a result holdings will vary considerably to the make-up of the Index. The Index is provided as a reference only. Source: Platinum for Fund returns and RIMES Technologies for MSCI returns.

3. The "Long%" represents the exposure to physical holdings, corporate fixed income securities and long stock derivatives as a % of NAV. The "Net %" represents the exposure of physical holdings and both long and short derivatives. The "Currency %" represents the currency exposure for the Fund as a % of NAV, taking into account currency hedging.

4. Top Ten positions shows the Fund's top long share exposure positions as a % of NAV. Long derivative exposures are included, however, short derivative exposures are not.

All data where MSCI is referenced is the property of MSCI. No use or distribution of this data is permitted without the written consent of MSCI. This data is provided "as is" without any warranties by MSCI. MSCI assumes no liability for or in connection with this data. Please see full MSCI disclaimer in www.platinum.com.au/our-funds/platinum-asia-fund/#FundPerformance.

- Most Asian markets were weak in May, as were European and emerging markets
- Investors seem to have engaged in a “flight to quality” with the US outperforming
- We see ongoing economic strength in major Asian markets, notably China and a reaccelerating India

The month of May saw Asian markets pause, as did most markets globally outside the US. Throughout 2018 it appears that economies in Europe, Asia ex-Japan, Japan and many emerging markets lost the growth momentum which was so apparent in late 2017. This may be in part due to tightening financial conditions in China, amid ongoing financial system reforms in that country. Also, readers will be all too familiar with the litany of geopolitical and trade stories which may have dented consumer and business confidence somewhat. However, we continue to see solid growth in China, while the Indian economy appears to have rebounded from a slowdown in recent quarters.

Recent data in China is strong. Power station coal consumption was up 28% year on year at the end of May, driven in part by hot weather. May’s manufacturing purchasing manager’s index (PMI) rose to 51.9 from 51.4 in April (with values over 50 representing expansion). May heavy duty truck sales were up 17% on a year ago. And steel production in mid-May was up 9% on last year.¹

Financial sector reforms continue apace in China. Thus far in 2018 there have been 20 cases of corporate bond defaults, with a nominal value of RMB16.7bn (A\$3.4bn) according to Chinese broker CICC. We believe the main driver of this is tightening of financial regulations. Financial institutions are pulling back from off-balance sheet activities and slowing their investments in non-standard credit assets. With tighter financing conditions, spreads widened and defaults have become more frequent. None of this looks out of control – spreads over Chinese government bonds have widened only mildly. We have already seen one lowering of China’s reserve ratio requirement, which increases the amount of liquidity available to the banking system, so far this year, showing that regulators are willing to offset the tightening impact of their reform efforts. Longer term, the importance of allowing firms to default is to buttress the functioning of credit markets in China, with market participants being moved to price credit risk appropriately, as implicit guarantees are removed.

Labour market tightness seems to be driving increasing corporate investment in China. Survey data from broker CLSA indicates that small and medium enterprise capex intentions were at their highest level in four years in the March quarter – we think this is tied to rising wages in China and further evidence of the modernisation of that economy.

In India, March quarter GDP growth accelerated to its highest in two years at 7.7% per annum. GDP growth was 6.1% p.a. one year ago, as the elimination of large denomination banknotes affected the economy. Credit growth has also reaccelerated to some degree, to 12.1% p.a. in the March quarter – the highest level in three years. Private sector banks are driving Indian credit growth – they have increased their market share by 6% to 31% of banking system assets over the last three years – comfortably outgrowing their state-owned peers which have been beset by poor lending standards and scandal in recent years. While the Indian equity market is generally quite expensive, the Fund has extensive holdings in private sector Indian banks.²

US vs. non-US performance: an extraordinary decade

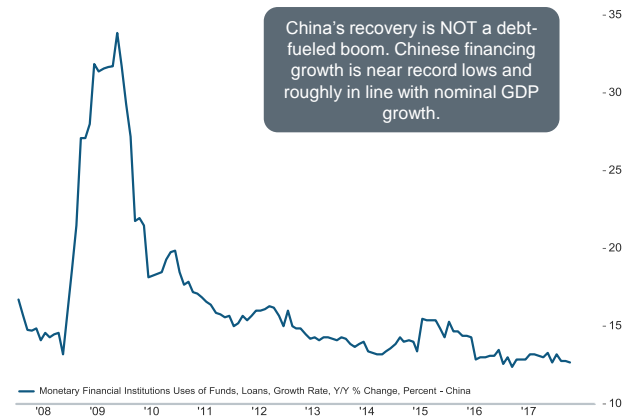

The last ten years have seen an amazing outperformance of the US versus the rest of the world’s equity markets (here we compare a US Index with a World ex-US index).

Source: FactSet

Chinese financing growth (% change YoY)

China’s recovery is NOT a debt-fueled boom. Chinese financing growth is near record lows and roughly in line with nominal GDP growth.

Source: PBOC, FactSet

India: moderating inflation and falling rates

Inflation (CPI, % change, YoY)

Indian policy interest rate (%)

Lower inflation, due to efficiency & less corruption, has led to lower interest rates (which remain high in real terms).
