1. & 2. Source: Platinum for Fund returns and Factset Research Systems for MSCI returns. Investment returns are calculated using the Fund's NAV unit price (i.e. exclude a buy/sell spread) for C Class and P Class (as indicated), and represent the combined income and capital returns for each of these unit classes in the specified period. All returns are pre-tax, net of fees and costs and assume the reinvestment of distributions. Returns for P Class are net of any accrued investment performance fee. The returns are calculated relative to the MSCI All Country Asia ex-Japan Net Index in A\$. Since inception date for C Class is 04/03/03 and for P Class is 03/07/17.

3. Since inception date of C Class has been used for the purposes of calculating since inception returns of the index. The investment returns depicted in the graph are cumulative on A\$20,000 invested in C Class units in the Fund since the C Class inception date. **Past performance is not a reliable indicator of future returns.** Platinum does not invest by reference to the weightings of the index. The index is provided as a reference only.

4. The "Top ten positions" show the Fund's top ten long securities positions as a percentage of the market value of the Fund's portfolio (including long securities and long securities derivative positions). All data where MSCI is referenced is the property of MSCI Limited ("MSCI"). No use or distribution of this data is permitted without the written consent of MSCI. This data is provided "as is" without any warranties by MSCI. MSCI assumes no liability for or in connection with this data. MARKET UPDATE AND COMMENTARY

- Asian markets were weak in September.
- Our contrarian holdings worked well in the month.
- The case for China – a cheap equity market and a system which has been reducing gearing for a decade.

Asian markets weak in September

Non-Japan Asian markets were weak in September, as was the Fund, albeit considerably less so as various of our contrarian holdings worked well in the month. Property developers China Resources Land and China Vanke were among the Fund's strongest performers for the month. In our view, some of the indiscriminate selling in the sector reversed during September. Regulatory pressure on highly indebted property developers is positive for the larger, better-run and much better-capitalised property developers that we own, which are on all-time low valuations.

No evidence of calamity

Among the detractors for the Fund was Alibaba – we have reinitiated a position in the company, which in our view will be a larger business generating strong earnings in five years' time. Some patience may be required though. Also among detractors for the month are our holdings in chip makers Taiwan Semiconductor Manufacturing and Samsung Electronics: these are long-term holdings in a consolidated industry with its most rational industry structure in decades. So, while the equity market frets about the potential for chip prices to decline from recent peaks, we are much more interested in the excellent returns these high-quality industrial firms can generate in coming years from current, undemanding valuations.

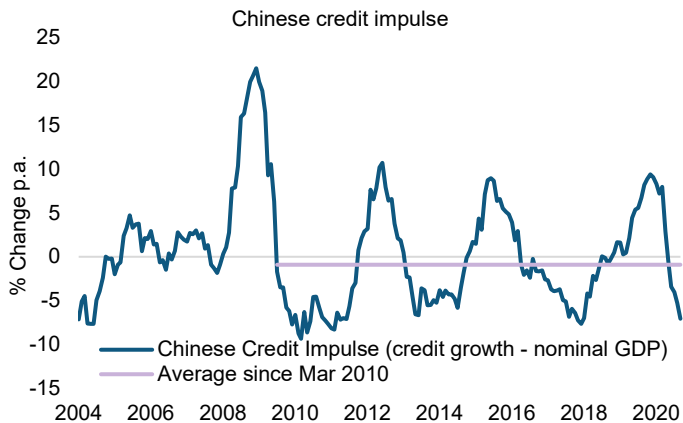

What is remarkable about the current iteration of "China crisis" headlines is how little markets are moving in response – the Shanghai Composite Index is well off its highs for the year, but basically flat for the year to date and up healthily over three years, interbank rates and China credit default spreads are not reflecting any distress, and commodity prices remain very strong. Indications are that the Chinese economy remains very healthy.

Producer prices rose 9.5% in August and the profit of industrial enterprises in August grew 10.1% vs. a year ago (Source: CICC). China's rapid economic growth is causing some strain on its power system. Thermal coal prices are rising to historically high levels globally and some power rationing is occurring in industrial firms within China, in order to allow households to avoid such rationing. Household power demand was up 12.5% vs. a year prior in August – hardly an indication of collapsing economic activity (Source: Citi).

Revisiting the case for Chinese equities

It is worth reiterating the investment case for China. In 2007, the Chinese equity market was the most expensive major market in the world on a price-to-earnings (P/E) basis, at 27x forward earnings (Source: Credit Suisse, using the MSCI AC China Index). Its economy was lauded for growing at staggering rates – 12% that year. And the country's economic model seemed unassailable. The Shanghai Composite fell 68% in a matter of months and it remains 38% below its 2007 peak some 14 years later (Source: FactSet, as at 4 October 2021). Hence our view that, in equity market terms, China does not look like a country that is about to have a financial crisis – it looks like a country that has already had one. The MSCI AC World China has de-rated from 27x in 2007 to 11x at present, going from one of the world's most expensive equity markets to among its cheapest (Source: Credit Suisse).

China's property price appreciation has been entirely unremarkable by global standards, its interest rates are among the highest of any major economy globally, first home buyers require ~30% deposits. This latter point does not get reported remotely enough: since the post GFC debt binge ending in 2010, credit growth in China has been below nominal GDP (see accompanying chart).
