Platinum Investment Management Limited ABN 25 063 565 006 AFSL 221935, trading as Platinum Asset Management ("Platinum") is the responsible entity of the Platinum Asia Fund (the "Fund"). The Fund's latest Product Disclosure Statement (the "PDS") provides details about the Fund. You can obtain a copy of the PDS from Platinum's website www.platinum.com.au, or by contacting Investor Services on 1300 726 700 (Australian investors only), or 0800 700 726 (New Zealand investors only), or 02 9255 7500, or via invest@platinum.com.au. The Fund's target market determination is available at www.platinum.com.au/Investing-with-Us/New-Investors. This information is general in nature and does not take into account your specific needs or circumstances. You should consider your own financial position, objectives and requirements and seek professional financial advice before making any financial decisions. Numerical figures have been subject to rounding. Platinum does not guarantee the performance of the Fund, the repayment of capital or the payment of income. The market commentary reflects Platinum's views and beliefs at the time of preparation, which are subject to change without notice. No representations or warranties are made by Platinum as to their accuracy or reliability. To the extent permitted by law, no liability is accepted by Platinum for any loss or damage as a result of any reliance on this information.

1. & 2. Source: Platinum for Fund returns and Factset Research Systems for MSCI returns. Investment returns are calculated using the Fund's NAV unit price (i.e. exclude a buy/sell spread) for C Class and P Class (as indicated), and represent the combined income and capital returns for each of these unit classes in the specified period. All returns are pre-tax, net of fees and costs and assume the reinvestment of distributions. Returns for P Class are net of any accrued investment performance fee. The returns are calculated relative to the MSCI All Country Asia ex-Japan Net Index in A\$. Since inception date for C Class is 04/03/03 and for P Class is 03/07/17.

3. Since inception date of C Class has been used for the purposes of calculating since inception returns of the index. The investment returns depicted in the graph are cumulative on A\$20,000 invested in C Class units in the Fund since the C Class inception date. **Past performance is not a reliable indicator of future returns.** Platinum does not invest by reference to the weightings of the index. The index is provided as a reference only.

4. The "Long %" is the exposure to long securities and long securities/index derivative positions, the "Short %" is the exposure to short securities and short securities/index derivative positions and the "Net %" is the exposure to long and short securities and long and short securities/index derivative positions, each as a percentage of the market value of the Fund's portfolio. The "Currency %" is the effective currency exposure as a percentage of the market value of the Fund's portfolio, taking into account long and short securities, cash, forwards and long and short securities/index derivative positions. For the "Industry breakdown", index positions (whether through ETFs or derivatives) are only included under the relevant sector if they are sector specific, otherwise they are included under "Other".

3. and 4. Country classifications for securities reflect Bloomberg's "country of risk" designations, and currency classifications for securities reflect the relevant local currencies of our country classifications.

4. The "Top ten positions" show the Fund's top ten long securities positions as a percentage of the market value of the Fund's portfolio (including long securities and long securities derivative positions). All data where MSCI is referenced is the property of MSCI Limited ("MSCI"). No use or distribution of this data is permitted without the written consent of MSCI. This data is provided "as is" without any warranties by MSCI. MSCI assumes no liability for or in connection with this data. Please see full MSCI disclaimer in <https://www.platinum.com.au/Special-Pages/Terms-Conditions>

MARKET UPDATE AND COMMENTARY

- Perceptions of risk versus the reality.
- China's restrained monetary response to COVID.

Amid the volatility of January in many markets, Non-Japan Asian markets were calm, with indices in the region basically flat and the Fund performing pleasingly.

Perceptions of risk versus the reality

At times, investors receive a reminder about what real risk is, as opposed to the perception of risk. China is a salient example of this. Over the last several years, we have been treated to a cacophony of voices reporting on political risk in China and foreign investors have abandoned the place in droves, we believe. But let us reflect on the nature of political risk in a place which states clearly what its policy objectives are, and then goes about achieving them.

We sold our holdings in Tencent and Alibaba in November 2020 because of clear regulatory statements. Let us quote ourselves from our update from that month:

“The proximal trigger came on 10 November when China’s State Administration for Market Regulation released draft antitrust rules. This was especially notable as it followed a revision to anti-monopoly laws earlier this year that specified the monitoring of the impacts of internet companies on outcomes in markets in which they operate. Behaviour targeted by the draft regulation includes: predatory pricing practices; forced exclusivity to gain access to platforms; forced bundling of transactions; and price discrimination using data on individuals (Source: Government releases).”

And yet we continue to see commentary regarding “political risk” in China.

China’s restrained monetary response to COVID

We are struck by the restraint of the Chinese response to COVID in terms of monetary and fiscal policy. This contrasts markedly to the country’s incredible splurge following the global financial crisis (GFC). Please see the accompanying chart of M2 (money supply) growth in China over the last 20 years. It is worth contrasting this with the accompanying chart of US M2 growth over the same period – note the colossal money supply growth there in response to COVID. In our view, the Chinese M2 explosion was not highly inflationary, indeed it turned out to be deflationary, because it went largely toward productive assets like steel capacity, aluminium capacity, roads and bridges. However, it was very distortionary – resulting in serious bad debts in the banking system, which the country has spent the following decade trying to address. In contrast, the US experience has been a large increase in consumption and very strong inflation. What the longer-term outcomes will be we will not speculate. But it seems unlikely there will be no cost to pay for such monetary excesses.

Hence, when we are confronted by the consensus view that China is risky and the US is safe in terms of equity investments, we tend to disagree. Both places confer risks, which need to be assessed and priced. And we feel cautiously optimistic that we are being adequately compensated in price for the risks inherent in investing in China (please see accompanying valuation and earnings growth charts).
