Historical performance is not a reliable indicator of future performance.

See note 1, page 11.

### In Brief:

- Stock markets continued their strong run over the quarter. A broad range of commodities also experienced strong price moves. These aligned with the US election and the announcement of successful COVID-19 vaccine trials.
- Many of the Fund's holdings benefited from the strong rally in economically sensitive stocks, including: Semiconductors (Samsung Electronics +39%, Micron Technology +60%); aerospace companies (General Electric +73%, MTU Aero Engines +50%); travel-related stocks (Amadeus +25%, Booking Holdings +30%); and copper producers (First Quantum Minerals +93%, Freeport-McMoRan +66%).
- Currency positioning also provided a positive contribution to the Fund's performance.
- The Fund acquired a new position in Banco Santander and continued adding to existing positions in Louisiana Pacific, UPM-Kymmene Oyj and InterGlobe Aviation. These purchases were funded via trimming a number of our strong-performing travel-related stocks and internet-related stocks.
- We are cautiously optimistic about medium-term returns based on the valuations and outlook for the companies in the portfolio. While we have seen strong stock price appreciation across many holdings, this has occurred in line with the improving prospects that were part of our original investment case.
- We will continue to take advantage of investment opportunities as they arise, but also maintain a relatively conservatively invested position by keeping cash reserves and short positions as insurance.

The Platinum International Fund (Quoted Managed Hedge Fund) (ASX code: PIXX) is a feeder fund that primarily invests into Platinum's flagship international equity fund, the Platinum International Fund ("PIF"), which was established on 4 April 1995.

The following is the 31 December 2020 Quarterly Investment Manager's Report prepared for PIF by its Portfolio Managers. Please note that in this report, the "Fund" refers to PIF and portfolio details, such as portfolio disposition, top 10 holdings and currency exposure, pertain to PIF's portfolio. Please be aware that PIXX and PIF (C Class - standard fee option) have different fee structures and therefore different returns. PIXX's returns may also vary from PIF's performance fee class (P Class) returns due to different cash holdings as well as gains and losses arising as a result of PIXX's market making activities.

PIF (C Class) returned 13.3% for the quarter and 2.6% for the calendar year.<sup>1</sup>

Given the economic downturn, loss of jobs, collapse in profits and general uncertainty created by the COVID-19 pandemic, it is remarkable that the stock market<sup>2</sup> ended the year in strong positive territory. Having said that, the global economy has continued its recovery as we approach the post-COVID era.

During the quarter, key events included the announcement of successful COVID-19 vaccine trials and subsequent commencement of vaccination programs across the globe. While significant logistical challenges remain, given the enormity of the task, it provides a clear pathway to the end of lockdowns and restrictions over the course of 2021, ensuring an ongoing economic recovery.

The other event of note was the election of Joe Biden as the next US President, which brings a much greater level of certainty to the global business environment. While there was strong bipartisan support for the actions taken by the US against China on trade and security, we would expect a more conventional negotiated approach to these issues, that take into consideration the economic interdependence of the two nations. As such, it is likely that the election result will lead to improving business and investor confidence.

These events sparked a strong rally in the share prices of economically sensitive businesses that will likely benefit from the ongoing recovery, including many of the Fund's holdings. Our semiconductor stocks, led by memory chip producers **Samsung Electronics** (up 39% over the quarter) and **Micron Technology** (up 60%), were major contributors to performance. Spot prices for DRAM (memory) chips rose in the latter half of the quarter, as manufacturing for 5G mobile handsets ramp up for delivery in 2021. Aerospace companies **General Electric** (up 73%) and **MTU Aero Engines** (up 50%) and other travel-related stocks, such as **Amadeus** (airline booking systems, up 25%) and **Booking Holdings** (online travel agent, up 30%) rallied as the roll-out of vaccination programs provided greater certainty on the return of international travel. Copper producers **First Quantum Minerals** (up 93%) and **Freeport-McMoRan** (up 66%) performed strongly on the back of a move in the copper price to over US\$3.50/lb for the first time since the tail end of the Chinese capital spending boom in early 2013.

<sup>1</sup> References to returns and performance contributions (excluding individual stock returns) in this PIXX report are in AUD terms, unless otherwise specified. Individual stock returns are quoted in local currency terms and sourced from FactSet Research Systems, unless otherwise specified.

Another contributor to performance was the currency positioning of the Fund, which held a low 19% average exposure to the US dollar (USD) over the quarter. The USD depreciated against not only the Australian dollar (AUD), but also the Euro (EUR), Japanese yen (JPY), Korean won (KRW) and Chinese yuan (CNY), which together represent the majority of the Fund's currency positioning.

The main detractor from performance was the short position in the Nasdaq Index. At a stock level, key detractors included **China Overseas Land & Investment** (down 13%), which was impacted by the Trump administration's restrictions on US citizens owning some Chinese firms and **Barrick Gold** (down 22%), which gyrated with movements in the gold price.

## Changes to the Portfolio

The Fund's net invested position increased over the quarter from 75% to 87%, with the main factor being the reduction of our Nasdaq Index shorts in November, which took our short book from 16% to 7%.

On currencies, since 20 March 2020 we have chosen to hedge out half of our natural position in the USD, with the proceeds invested in the EUR, CNY and AUD. This has resulted in a 17% exposure to the USD in the Fund at 31 December 2020. The rationale is that the US, having been unable to control the coronavirus, is certainly winning the race in terms of aggressive stimulus and money printing. While this will create economic activity, the offset is likely to be a weaker USD. The illustration of the weak dollar thesis playing out can be seen in the AUD, appreciating 12% vs. the USD over the last six months, while it has moved very little vs. the EUR or CNY.

In terms of changes to holdings, notable purchases included:

**Louisiana Pacific (LP)**. LP is a US manufacturer of building materials, with its two main products being oriented strand board (OSB) and 'SmartSide'. Certain areas of residential building products can be highly attractive businesses, particularly where they are marketed directly to the consumer and national distribution is hard to replicate.

LP's SmartSide product fits this bill. It has carved out a duopoly with James Hardie in the premium US siding market, where its engineered wood siding has been taking market share for a number of years, given its better durability, cost of ownership and visual aesthetics versus alternatives like vinyl. This has allowed the siding business to grow at 10% p.a. for a number of years, while making high-teen earnings before interest and tax (EBIT) margins and a circa 30% return on capital.

While the company is currently benefiting from strong activity in the US housing market, there is still an underappreciation of the siding business, as evidenced by the significant valuation multiple difference between James Hardie and LP. Over the past decade, SmartSide has grown from 20% of LP's earnings to 40%, and over the next five years, it could comprise up to 60% and beyond, which would improve the quality of the group's earnings and warrant a higher multiple.

**UPM-Kymmene Oyj (UPM)**. UPM is a Finnish-based pulp and speciality paper/wood products company. The business is investing in a number of high-returning projects that should drive considerable earnings growth over the next five years.

These include the completion of their 2.1 million tonne pulp mill in Uruguay. In planning for over 10 years, this mill is highly cost competitive in a global sense and will represent a 50% increase to their current pulp capacity. A second source of growth is UPM's expertise in using wood-based feedstocks to make high-quality renewable fuels and bioplastics. There is a strong push within Europe towards renewable solutions, both from the government and corporates, with demand for products like bioplastics completely outpacing supply. UPM is spending €1.6 billion to expand its bio-diesel/plastics production, with customers already offering to purchase the entire offtake.

Elsewhere, the Fund acquired a new position in **Banco Santander**, a multinational banking group that has its main operations in Spain, UK, USA, Brazil and Mexico. The highly profitable operations in Brazil and Mexico are the jewels in the crown. The US business skews to the riskier end of consumer lending which, properly managed, can be highly profitable. On the other hand, the UK and Spain are highly competitive markets with weak credit demand and low interest rates. Earning an adequate return there will require improvement in the external environment and management action.

We paid 1.5x earnings before tax and loan loss provisions for this business. Thinking back to the Global Financial Crisis (2008-09) and the European Sovereign Debt Crisis (2012-13) banks rarely traded below 2.5x on this measure. Yet those were true existential crises. In 2009, the fear was not that some banks would fail but that **all** banks would fail. In 2013, the fear was that the financial order in some large developed economies would collapse entirely. By contrast, in 2020 the concern is simply that banks face reduced profitability. The share price action of European banks in 2020 was essentially an almighty dummy-spit by investors, aggravated by years of successive disappointment, which gave us a rare buying opportunity.

We also continued to add to our positions in **InterGlobe Aviation** (Indian low-cost airline) and **AIA** (life insurer). These purchases were funded via trimming a number of our strong-performing travel-related stocks (**Amadeus, Booking Holdings, Vail Resorts**) and internet-related stocks (**Alibaba, Alphabet, Tencent**).

## Outlook

We are cautiously optimistic in the medium term about the future returns of the portfolio based on the valuations and outlook for the companies in the portfolio. While we have seen strong stock price appreciation across many holdings, this has occurred in line with the improving prospects that were part of our original investment case for making these investments. The memory chip makers Samsung and Micron, or the copper producers First Quantum and Freeport-McMoRan, are cases in point. Both groups of companies have seen lifts in their product prices and thus profits, as a result of tightness in supply, which we expect will be maintained for a number of years. That we are still in the early stages of the post-COVID recovery provides additional support for the investment case. As such, we remain comfortable that these companies are still in the early stage of their business cycles and believe they can still produce good returns from here.

The other element of our optimism is that even where we may start to trim some of these good performers, we continue to find new prospective ideas to add to the portfolio. In the shorter term, our concern is for the potential unwinding of the speculative mania in growth stocks. The end of the technology bubble in 2001 showed that it is feasible for our 'real' economy companies in the portfolio to appreciate while 'virtual' counterparts collapsed. While many

investors may find it hard to envisage that a sell-off in these market favourites would not impact the rest of the market, it would only represent a reversal of the trend of the last two years that has been unprecedented in financial history.

The more concerning risk for future returns is the possibility of a financial accident akin to what happened during the global financial crisis (GFC). For years after the GFC, many commentators were obsessed with the idea that the world had too much debt (though it should be noted that they never provided a framework for thinking about what was the right level of debt). Today, after an enormous increase in indebtedness across the global economy, as a result of the fiscal policy response to the pandemic, perversely there is little discussion about the levels of debt. Indeed, the increasing attention to the idea of Modern Monetary Theory (MMT)<sup>3</sup> lends greater credence to the suggestion that levels of debt don't matter. While we can't provide the framework to say how much debt is too much, that this debt has been accrued at a time when there is such a high level of certainty that interest rates will stay at near zero levels, is an uncomfortable backdrop for investors. We would expect if stress develops in financial markets, the most likely warning bells will come in the debt markets. At this stage, there are no signs of any such stress in debt markets and indeed, they continue to perform strongly.

The difficulty in dealing with this type of risk is that it may or may not be realised, and if there is an event, it is likely to arise relatively quickly. We will continue our approach of taking advantage of investment opportunities as they arise, but also maintaining a relatively conservatively invested position by keeping cash reserves and short positions as insurance.

## Top 10 Holdings of PIF

COMPANY	COUNTRY	INDUSTRY	WEIGHT
Samsung Electronics Co	Korea	Info Technology	5.1%
Glencore Plc	Australia	Materials	3.5%
Ping An Insurance	China	Financials	3.1%

<sup>3</sup> Modern Monetary Theory is based on the premise that if a country is responsible for issuing its own currency, then there are no limitations on how much money it can print (and hence spend) and therefore, the amount of debt it incurs is inconsequential. MMT has divided economists and market practitioners alike, with opponents arguing that this approach is inflationary.

# Macro Overview

by Andrew Clifford, CIO, Platinum Investment Management Limited

## Regulation, Rates and Inflation - Risks to Watch in 2021?

While stock markets continued their strong run over the last quarter, from early November it was notable that many companies with economically sensitive (cyclical) businesses experienced strong stock price performance. Similarly, there were strong price moves across a broad range of commodities (particularly iron ore and copper) over this same period. These moves in markets are consistent with investors pricing in continuing improvement in the global economic outlook for the year ahead. The commencement of these stock and commodity price moves aligned with the US election and the announcement of successful COVID-19 vaccine trials.

While the high-flying growth stocks continued to perform well, the continued economic recovery potentially poses a threat via higher inflation and interest rates. Similarly, the 'anti-monopoly' movement is gaining momentum, not only in the US and Europe, but also in China, which represents a potential risk to the business models of many of the popular growth names. It is certainly too early to make such bold predictions about either interest rates or changes in regulatory regimes, but the unfolding of events over recent weeks lead us to restate our conclusion from last quarter that: ***We believe extreme caution is warranted in regards to the market's current 'high flyers', while opportunities abound elsewhere.***

**The election of Joe Biden as the next US President is likely to reduce the uncertainty around the US-China relationship generally and trade and tariffs in particular.**

While the complaints around China's behaviour on various fronts, from the South China Sea to unfair trade practices, had strong bipartisan support in Washington and within the US government, it appeals to us that President-elect Biden is a far more conventional politician than his predecessor. As such, we would expect a more traditional negotiated approach to the various issues rather than random decrees issued via Twitter.

Such a considered approach is likely to recognise the deep interdependence of the US and China economies, especially in industries such as semiconductors and electronics, where neither side can operate without the other in the medium term. From a political point of view, we acknowledge that it would be difficult for President-elect Biden to outright reverse the bans on Huawei or lift recent sanctions on Chinese companies linked to the People's Liberation Army (PLA), potentially these measures can be quietly diluted over time. However, even if they stand, a more reasoned approach to trade and tariffs is likely. The importance of this, is the certainty that it brings both to businesses in making long-term investment decisions and for investors in assessing the long-term potential of companies.

At the time of writing, the Georgia Senate run-off elections were about to take place. Success in both seats would result in Democrats having effective control of the Senate and the potential for Biden's policies on infrastructure spending (including green initiatives), expansion of the Affordable Care Act (designed to provide affordable health insurance coverage for all Americans), funded by a reversal of some of Trump's tax cuts, to be put into place. Whether this result unfolds (the polls and betting markets suggest a very tight race), it is highly likely that substantial ongoing fiscal stimulus will occur. In the final days of 2020, the US Congress passed a stimulus bill valued at US\$900 billion, or 4.4% of GDP. By any standard this is a significant fiscal spend, particularly when considered in light of the previous US\$2 trillion of stimulus that is still flowing through the system and an economy that by all measures is recovering very quickly.<sup>1</sup>

---

**The news of successful COVID-19 vaccine trials and subsequent regulatory approvals reduces uncertainty on the pathway out of the pandemic.** The day-to-day news regarding new COVID-related lockdowns in Europe (as well as locally), together with rising infections in the US make for sombre reading. However, the beginning of vaccination programs in the US and Europe offer a very clear light at the end of the tunnel. While there remain unanswered questions around the longevity of the immune response, new variants of the virus are developing, and there are significant logistical issues in dealing with the vast numbers involved, it is highly likely that substantial portions of the US and European populations will be immunised by the end of 2021. China has also approved a locally developed vaccine for use in the general population, which is likely to be used broadly in the developing world. It should also be noted that there are numerous other vaccines in late stages of development and through time, individual vaccines will be refined in response to outcomes of current programs.

While we have been of the view that the development of an effective vaccine was highly likely (as discussed by portfolio manager and resident virologist, Dr Bianca Ogden in the article "*COVID-19: Demystifying this Frightening Disease*<sup>2</sup>"), the start of the vaccination programs significantly reduces the risk of shutdowns and travel restrictions continuing beyond the end of 2021. Again, this reduces the long-term uncertainty faced by businesses, particularly those impacted directly, such as travel-related industries. Of course, the year ahead remains difficult, but in the context of the stock market, the value of companies is determined by at least a decade of future profits, not just the next six to 12 months.

<sup>2</sup> <https://www.platinum.com.au/Insights-Tools/The-Journal/COVID-19-Demystifying-this-Frightening-Disease>

**The 'anti-monopoly' movement has also continued to gain momentum not only in the US but also China.** In the US, the Federal Trade Commission and 48 states filed two antitrust lawsuits against Facebook, focused on acquisitions and the impact on competition. The Department of Justice filed a case against Google claiming they used anti-competitive tactics to protect its monopoly over search. These cases join various actions in the European Union and Australia's move to make the likes of Facebook and Google pay other media outlets for the use of their content. In China, regulators outlined restrictions on how consumer data can be used in relation to anti-competitive practices. Investigations have also commenced into suspected anti-competitive practices at Alibaba, financial regulators having earlier suspended the initial public offering (IPO) of their financial arm, Ant Group.

The dominant e-commerce and technology giants have amassed huge user numbers over the last decade, providing them with enormous market power and highly profitable business models. Indeed, social media platforms have been seen as responsible for swaying elections and enabling uprisings. Our key point is that governments the world over will attempt to rein in this power, and as such there is a genuine risk of additional regulation for dominant players in e-commerce, payments and social media.

**One interesting development has been shortages in a range of commodity products from steel to electronic components and silicon wafers, despite the global economy remaining at pre-COVID levels.** The explanation behind these shortages is likely multifaceted. The demand for goods (electronics, autos, home furnishings and renovations) has been strong while services (travel, eating out and

**Fig. 1: Strong Recovery in Commodity Prices Post COVID-19 Lockdowns**

Source: Copper: High Grade Copper (NYM \$/lbs) from FactSet Research Systems (to 31 December 2020), Steel: US Midwest Domestic Hot-Rolled Coil Steel (CRU) Index (NYM \$/st) from FactSet Research Systems (to 31 December 2020).

entertainment) has been weak. Thus, there has been a short-term boost in demand while suppliers of inputs potentially cut output on initial expectations of reduced demand or COVID-enforced closures. Potentially, these shortages and the associated higher prices may be relatively short-lived, however, a lack of significant investment in new capacity for a period of time in many of these industries may see longer-term shortages developing.

This has all occurred before any economic benefit that may accrue from the continued post-pandemic opening or improving business optimism following the US election. With governments around the world likely to continue spending to accelerate the economic recovery, this could potentially exacerbate the shortages over the course of 2021. While there is no evidence of a rise in inflation in goods and services in the major economies yet, it is easy to see an inflation scare unfolding as the year progresses.

**The stock market bull run has continued, though the better performance of economically sensitive stocks is an interesting development.** In most respects, the stock price recovery of these 'real world' businesses is hardly surprising. Economic activity continues to recover and vaccinations provide a pathway to full recovery over the course of 2021. The potential for better trade relations between the US and China under a Biden presidency point to less risk of the world slipping back into tariff-inspired manufacturing recessions, as experienced in 2018-19.

Governments continue to promise more spending, focused on real world activities, such as infrastructure and 'decarbonising' projects (i.e. renewable energy and electric vehicles). Additionally, valuations were generally deeply depressed, as investors avoided companies facing any uncertainty in their future earnings.

On the other hand, the speculative mania in growth stocks has continued to a large extent unabated. The market for new listings has remained excitable with many stocks continuing to debut at prices of 50% or more above their issue price. Issuance of special purpose acquisition companies (SPACs)<sup>3</sup> continue, as have elevated levels of retail participation in the market. Valuations have moved from extraordinary to even higher. The one area that has slowed somewhat are the 'megacap' FAANG stocks (Facebook, Amazon, Apple, Netflix and Google owner Alphabet), perhaps in response to the various antitrust initiatives, or possibly reflecting the beginnings of a loss of momentum for growth stocks more generally.

As we have stated in previous reports, manias tend to end abruptly. The significant bull markets of the last 40 years have come to an end when monetary conditions tighten. While it is hard to imagine a traditional central bank tightening cycle currently, potentially a slowing of the printing presses may be enough. Alternatively, an inflation scare could push long-term interest rates higher with ramifications for stocks whose valuations are based on the premise of near-zero interest rates.

***When a collapse in the stock prices of growth stocks comes, it too should not come as a surprise.*** When companies are valued on multiples of sales (not profits) of 20 times or more, the probability that their business will meet investor expectations on growth rates and profitability, to justify the valuation, is simply remote. A select few may achieve what is needed to provide investors with a reasonable return, but in aggregate one should ultimately expect substantial losses on the holding of a portfolio of such stocks.

---

<sup>3</sup> SPACs raise funds from investors and use those funds to acquire existing, privately held companies with the intention of taking them public via an IPO.

2020 was certainly a most unusual year and perhaps doubly so in the stock market. However, the two bedrocks of our investment approach remain. Firstly, **investors' cognitive biases will cause them to overemphasise recent events and news.** This means the best investment opportunities can often be found in areas the crowd is avoiding; while those investments the crowd is embracing are best avoided. There is nothing to suggest that 2020 has changed basic human psychology. Indeed, the evidence shows quite the contrary, with significant returns achieved in unpopular areas, such as semiconductors and commodities.

Our second fundamental investment principle is that **the price you pay for an asset will determine your return.** While you may buy overvalued stocks that move higher, over time this approach is unlikely to yield good returns, as ultimately the stock price will reflect assessments of future profits and cashflows from the business.

Of course, we know that speculative bull markets can run for a long time, but the pain for those investors who don't exit the party in time can be significant.

**Notes:** Unless otherwise specified, all references to "Platinum" in this report are references to Platinum Investment Management Limited (ABN 25 063 565 006 AFSL 221935).

"PIXX" refers to the Platinum International Fund (Quoted Managed Hedge Fund) (ARSN 620 895 301, ASX Code: PIXX). "PIF" refers to the Platinum International Fund (ARSN 089 528 307), the unlisted underlying fund into which PIXX invests primarily.

Some numerical figures in this publication have been subject to rounding adjustments. References to individual stock or index performance are in local currency terms, unless otherwise specified.

1. PIXX's returns are calculated by Platinum using PIXX's net asset value unit price (i.e. excluding the buy/sell spread) and represent the combined income and capital returns over the specified period. PIXX's returns are net of fees and costs, pre-tax, and assume the reinvestment of distributions. The MSCI index returns are in AUD, are inclusive of net official dividends, but do not reflect fees or expenses. MSCI index returns are sourced from FactSet Research Systems. Platinum does not invest by reference to the weightings of the specified MSCI index. As a result, PIXX's underlying holdings may vary considerably to the make-up of the specified MSCI index. MSCI index returns are provided as a reference only. The investment returns shown are historical and no warranty is given for future performance. Historical performance is not a reliable indicator of future performance. Due to the volatility in PIXX's underlying assets and other risk factors associated with investing, investment returns can be negative, particularly in the short term.
2. The geographic disposition of assets (i.e. other than "cash" and "shorts") shows PIF's exposures to the relevant countries/regions through its long securities positions and long securities/index derivative positions, as a percentage of its portfolio market value. With effect from 31 May 2020, country classifications for securities were updated to reflect Bloomberg's "country of risk" designations and the changes were backdated to prior periods. "Shorts" show PIF's exposure to its short securities positions and short securities/index derivative positions, as a percentage of its portfolio market value. "Cash" in this table includes cash at bank, cash payables and receivables and cash exposures through derivative transactions.
3. The table shows PIF's net exposures to the relevant sectors through its long and short securities positions and long and short securities/index derivative positions, as a percentage of its portfolio market value. Index positions (whether through ETFs or derivatives) are only included under the relevant sector if they are sector specific, otherwise they are included under "Other".
4. The table shows PIF's top ten positions as a percentage of its portfolio market value taking into account its long securities positions and long securities derivative positions.

**Disclaimers:** This publication has been prepared by Platinum Investment Management Limited ABN 25 063 565 006 AFSL 221935, trading as Platinum Asset Management (Platinum®). Platinum is the responsible entity and issuer of units in the Platinum International Fund (Quoted Managed Hedge Fund). This publication contains general information only and is not intended to provide any person with financial advice. It does not take into account any person's (or class of persons') investment objectives, financial situation or needs, and should not be used as the basis for making investment, financial or other decisions. You should read the entire Product Disclosure Statement (including any Supplement(s) thereto) for the Platinum Quoted Managed Funds® ("PDS") and consider your particular investment objectives, financial situation and needs before making any investment decision to invest in (or divest from) PIXX. You can obtain a copy of the current PDS from Platinum's website, [www.platinum.com.au](http://www.platinum.com.au) or by phoning 1300 726 700 (within Australia), 0800 700 726 (within New Zealand) or +61 2 9255 7500, or by emailing to [invest@platinum.com.au](mailto:invest@platinum.com.au). You should also obtain professional advice before making an investment decision.

Neither Platinum nor any company in the Platinum Group®, including any of their directors, officers or employees (collectively, "Platinum Persons"), guarantee the performance of PIXX, the repayment of capital, or the payment of income. The Platinum Group means Platinum Asset Management Limited ABN 13 050 064 287 and all of its subsidiaries and associated entities (including Platinum).
