- Non-Japan Asia markets continued their strong performance.
- China-US tension is ongoing.
- China's domestic recovery appears robust.

August saw positive returns for non-Japan Asian equity markets and a pleasing result for the portfolio. The portfolio's holding in petrochemicals and electric vehicle (EV) input maker, LG Chem was the strongest contributor for the month, as the company's share price benefited from excitement around the EV theme. All other top ten contributors to performance in August were Chinese or Hong Kong listings, benefiting from the gradual but persistent recovery of the Chinese economy, and consumption in particular. Interestingly, the portfolio's main detractors from performance included many of our biggest holdings in technology, such as Samsung, Tencent and Taiwan Semiconductor Manufacturing, indicating the diversity of performance drivers available in Asian markets, as opposed to the narrow leadership of markets elsewhere.

The month just passed saw ongoing evidence of US-Chinese political tension. This now seems a permanent feature of the global political economy, in our view. The last month saw the Trump administration ban Tencent's WeChat app from the USA; clarification followed rapidly that US firms – notably Apple – can continue to offer WeChat for download within China (Source: BBC; Bloomberg). To understand why, consider that out of 1.3 million people responding to a survey on Chinese social media site, Weibo, 1.2 million indicated that they would switch to a new phone rather than do without WeChat (Source: South China Morning Post).

Of particular strategic importance was a story from Reuters that the Trump administration is considering adding China's largest and most advanced semiconductor chipmaker, SMIC, to a trade blacklist. This would effectively make the company unable to operate, in our view. This would be an extreme provocation. Our framework for assessing Sino-US tensions is that the situation is comparable to the mutually assured destruction dynamic of US-Soviet relations. There can be no winner, should tensions erupt into "kinetic war". However, we expect the tension between the era's two great powers will be ongoing, with factions on both sides benefiting from the existence of a common enemy or scapegoat. We continue to monitor the situation assiduously.

During August, Alibaba released its results for the quarter to 30 June 2020, the first quarter of the company's financial year. We thought the results were positive. Revenue grew 34% and operating profit was up 31% on the year prior (Source: Company filings). We thought it was notable that the domestic Chinese e-commerce sector appears to have fully recovered, with all categories growing at similar or faster rates to the December quarter of 2019, prior to the impact of COVID-19; the shift to buying groceries on Alibaba's platforms evident during COVID-19's impact appears to have continued into the current quarter; and the cloud computing business recovered fully from early 2020's economic slowdown and grew revenue 59% year-on-year during the quarter (Source: Company filings). Alibaba was among the top ten contributors to portfolio performance during the month.

China's economic recovery was corroborated by another 50-plus reading on the country's Purchasing Managers' Index (PMI), with the official PMI reading for August coming in at 51 (Source: FactSet Research Systems). The recovery is patchy, with disaggregated PMI data showing weakness in areas such as employment, exports, imports and among small enterprises (Source: FactSet Research Systems). Anecdotal evidence among companies we monitor globally provides evidence of the strength of the Chinese industrial recovery. German chemical giant, BASF indicated that its Chinese sales were up 28% year-on-year in the month of June versus the prior year in a recent conference call (Source: Company filings). China's heavy-duty truck sales were up 75% year-on-year in the month of August (Source: CVworld.cn). Research firm, Mysteel reported that major construction and infrastructure projects commencing in China were up 55% versus the month prior, with total spending increasing by 22% versus the month prior.

Non-Japan Asia continues to provide diverse opportunities, with relatively cheap markets (namely South Korea and China) and the region's dominant economy, China, recovering well from the impacts of COVID-19.

Major market price-earnings ratios - Next 12 months

Source: Chart 1 – IBES consensus, in local currency.  
Correct as at 7 September 2020.

Earnings per share growth - Next 12 months

Source: Chart 2 – IBES consensus, in local currency.  
Correct as at 7 September 2020.

Chart 1 and 2 shows valuations based on sell-side consensus estimates. It is worth noting at this stage, that in our view these earnings forecasts will very likely come down substantially to reflect the impact of the coronavirus-related slowdown in the global economy.
