MARKET UPDATE AND COMMENTARY

- Weak performance in July, once again reflecting concerns on China.
- Chinese property development concerns are exaggerated - in our view.

Performance was weak in July, with our Chinese tech holdings (particularly Tencent and Alibaba) and our Chinese property development stocks key detractors. Positive contributors for the month were mixed by industry across China, South Korea and India (with notable performers including Estun Automation, LG Chem and Macrotech Developers). A short position against India's Nifty index also contributed positively.

China's property "crisis"

Once again, Western media is replete with stories of China's "property crisis". These are exaggerated, in our view. China embarked on a program of regulation designed to prevent speculation in property at least six years ago, summarised by Chinese President Xi Jinping's motto "a house is for living in, not speculating on", which he said toward the end of 2016 (Source: South China Morning Post). More recent reform efforts have been designed to curtail the activities of highly indebted property developers under China's "three red lines" guidelines. These guidelines are all related to the level of gearing that Chinese property developers can take on.

The central government has embarked on what we would characterise as a controlled demolition of small, highly geared property developers and is seeking to break the nexus between local property developers and local officials who raise revenue by selling land for development. This is disruptive. It is not a crisis. We would ask readers to look at the share prices of the better-quality Chinese property developers, such as China Resources Land or China Overseas Land & Investment – these have risen over the past year and are far from indicating distress. These are businesses with long track records of high returns on capital, under-leveraged balance sheets and a colossal runway of growth over decades, in our opinion, as China continues to urbanise.

There is a common belief that China has grossly overbuilt apartments and that there are ghost towns everywhere. We ask readers to consider the following facts. Over the past 20 years, China has completed residential construction of 11,015 million square metres (sqm). That is roughly 124 million apartments of 89sqm size, noting that 70 per cent of apartments in China need to be smaller than 90sqm by law (Source: CLSA). Assuming a household size of three people, those apartments are now housing around 371 million people, versus China's urban population of 848 million in 2019 (Source: State Council of the People's Republic of China). That means there are almost half a billion people living in properties of greater than 20 years of age – and China only started building modern housing when it liberalised the housing market in the 1990s. The older housing stock is of extremely poor quality, often with shared bathrooms and kitchens between multiple apartments. Further, China's urbanisation rate of 61% compares to 81% in South Korea and 92% in Japan (Source: World Bank). As such, we expect urbanisation to continue for several decades in China.

In the near term, the Chinese government is likely to step in to alleviate the distress of mortgagees who have drawn down mortgages for unfinished properties with developers who are in distress. However, government officials seem reluctant to let either mortgagees or banks fully off the hook as they seek to avoid moral hazard, even as they consider deploying some US\$148 billion to alleviate the worst of the distress for mortgagees in particular (Source: Financial Times). Asian markets remain characterised by rapid earnings growth and reasonable multiples. The past month has seen equity investors flock back to familiar territory in US tech stocks as US 10-year bond yields have fallen. We continue to see far more value and potential in our holdings in Asia than is apparent in crowded sectors such as US tech and consumer.
