Platinum Investment Management Limited ABN 25 063 565 006 AFSL 221935, trading as Platinum Asset Management ("Platinum") is the investment manager of Platinum Capital Limited ("PMC"). This information is general in nature and does not take into account your specific needs or circumstances. You should consider your own financial position, objectives and requirements and seek professional financial advice before making any financial decisions. Numerical figures have been subject to rounding. Neither PMC nor Platinum, guarantee the performance of PMC, the repayment of capital or the payment of income. The market commentary reflects Platinum's views and beliefs at the time of preparation, which are subject to change without notice. No representations or warranties are made by PMC or Platinum as to their accuracy or reliability. To the extent permitted by law, no liability is accepted by PMC or Platinum for any loss or damage as a result of any reliance on this information.

1. Source: Platinum. The pre-tax NTA was calculated in accordance with Australian Accounting Standards, based on the fair value of all investments. The post-tax NTA is the pre-tax NTA after provision for tax on both realised and unrealised income and gains. The NTA is unaudited.

2. Source: Platinum for portfolio returns and Factset Research Systems for MSCI returns. The returns are calculated relative to the MSCI All Country World Net Index in A\$ (except the gross MSCI index was used prior to 31/12/96). Past performance is not a reliable indicator of future returns. Platinum does not invest by reference to the weightings of the index. The index is provided as a reference only.

3. Shows dividends paid during the calendar year. This information is historical. No guarantee is given about future dividends or the level of franking of such dividends (if any).

4. The "Long %" is the exposure to long securities and long securities/index derivative positions, the "Short %" is the exposure to short securities and short securities/index derivative positions and the "Net %" is the total of the "Long %" and "Short %", each as a percentage of PMC's portfolio value. The "CCY %" is the effective currency exposure of PMC's portfolio as a percentage of its portfolio value, taking into account long and short securities, cash, forwards and long and short securities/index derivative positions. For the "Industry breakdown", index positions (whether through ETFs or derivatives) are only included under the relevant sector if they are sector specific, otherwise they are included under "Other".

4. and 5. Country classifications for securities reflect Bloomberg's "country of risk" designations, and currency classifications for securities reflect the relevant local currencies of the country classifications.

5. The "Top ten positions" show PMC's top ten long securities positions as a percentage of PMC's portfolio value (including long securities and long securities derivative positions).

All data where MSCI is referenced is the property of MSCI Limited ("MSCI"). No use or distribution of this data is permitted without the written consent of MSCI. This data is provided "as is" without any warranties by MSCI. MSCI assumes no liability for or in connection with this data. Please see full MSCI disclaimer in <https://www.platinum.com.au/Special-Pages/Terms-Conditions>

## MARKET UPDATE AND COMMENTARY

- The portfolio rose 0.8% for the month and 10.6% for the year.
- The net invested position remains near historical averages.
- Looking forward, there are exciting opportunities on the long side, but we remain wary of further market weakness.

### Market Commentary

After an extraordinary March, markets were relatively calm throughout April, even with the hangover from the US regional bank runs continuing to be felt, with First Republic Bank the latest to collapse in late April. Many commentators are trying to gauge the broad economic impacts if banks further tighten credit availability. US Treasury Secretary Janet Yellen noted during the month that more conservative bank lending would help the Federal Reserve's (Fed) cause for a tighter liquidity environment and its goal to moderate economic growth. Regardless, the labour and construction markets in the US remain incredibly strong as inflation continues to cycle lower (but remains above the Fed's target).

Very strong earnings updates, AI excitement, cost cuts and stock buyback programs saw the market again favour mega-cap technology stocks. This crowding into only a handful of names has meant that for the calendar year to date (CYTD), only 32% of S&P 500 stocks have outperformed the index - the lowest since 1999 (source: Jefferies). Further, two-thirds of the S&P 500's returns for the CYTD are thanks to only five stocks (source: Goldman). The crowding into the large-tech names signals to us a lack of conviction in the current rally and that investors have returned to hiding in mega-cap 'safe' names as the outlook remains very uncertain. The S&P 500 still trades at a very high valuation multiple relative to history and we continue to think there are better investment opportunities elsewhere.

Over the month, we also heard increasing noise surrounding the US debt ceiling. The market seems to be looking through this at the moment, but we believe the noise and brinkmanship will increase as we approach the ceiling sometime in June/July. Our base case is that this will be resolved, as it was in 2011.

Our Chinese positions detracted 0.3% for the month but contributed 2.0% for the year. We continue to believe that China is a much-unloved stock market, and we remain confident in the Chinese businesses we hold. China remains in a different part of its economic cycle from economies in the West, and the government is taking clear steps to stimulate the economy. Chinese consumption and travel continue to rebound while the production side of the economy lags.

We continued to add selectively to financials while rotating some energy exposure during April. Although this month was calm compared to the March quarter, we continue to believe that volatility will return as the decades-long easy money regime normalises. We expect much more divergent markets over the course of 2023, as a complex and uncertain environment creates mispricing in equities. We think this is a great market for active, 'true' investors.

Our net exposure remains at around 70%. We continue to buy stocks that we think offer good value and remain excited by opportunities across decarbonisation, semiconductors, travel, Chinese consumers, financials, and growth industrials. Our short book remains dynamic and aims to protect capital. The composition of the short portfolio continues to have less emphasis on highly valued growth names and more on COVID beneficiaries (e.g. retailers, e-commerce, logistics) that we expect will have weak earnings outcomes in the year ahead.

### Performance Analysis\*

For the CYTD, our long positions contributed 8.7% to the portfolio's return, while our short positions detracted 2.1%. The portfolio's CYTD return was driven by a broad array of long positions, with our industrials and travel names being the standouts (MinebeaMitsumi, General Electric, Wizz Air, Airbus, Booking Holdings). Semiconductor names have also been solid contributors (Micron, Infineon Technologies, Samsung Electronics, Microchip).

### Valuation

The portfolio's aggregate valuation metrics are attractive in both an absolute sense and relative to the market, with a 40% higher starting earnings yield and a 42% discount on an asset basis (see table below).

Metric	Platinum Capital Limited	MSCI AC World Net Index (A\$)
NTM Earnings Yield	9.1% (Price-to-Earnings ratio of 11x)	6.5% (Price-to-Earnings ratio of 15.3x)
NTM Dividend Yield	3.3%	2.7%
NTM Enterprise Value-to-Sales	1.3x	1.6x
LTM Price-to-Book Ratio	1.5x	2.6x

The valuations in the table have been calculated by Platinum and for the portfolio refer to the long portion of the portfolio, exclude negative net earnings and use FactSet consensus earnings. As at 30 April 2023. NTM = next twelve months. LTM = last twelve months.

\*Source: Platinum. Contribution numbers are based on the total return of individual positions (in AUD) and are gross as they do not take into account the portfolio's fees and costs (other than brokerage). **Past performance is not a reliable indicator of future returns.**
